Jul 11, 2000

DOCUMENT-IDENTIFIER: US 6088229 A

TITLE: Electronic apparatus having a locking device for preventing theft of memory cards and disk drive

## Detailed Description Text (27):

Moreover, according to this structure, since the lock metal member 40 is held in the <u>locked position</u> by the antitheft lock device 32 of portable computer 1, there is no need to provide a special lock mechanism for preventing a theft of the PC cards 22. Thus, there is no need to provide a special space within the limited inside space of housing 4 for disposing such a lock mechanism. Therefore, the size and weight of the housing 4 can be decreased and the manufacturing cost of the portable computer 1 can be reduced.
